We have discussed the WTC BID's desire to complete the landscape lighting project along Sepulveda that we started several years ago. In that regard, we renewed our "A" Permit on Friday, June 1 (#A2012-000887). Frankly, it was high project costs for the palm tree lighting that caused the BID to suspend project completion. The plan includes some expensive uplighting of the palms. At this point we would like to substitute LED lighting for the spot light fixtures. That's really a minor change technically but has enormous cost implications. Is that a change our contractor can make in the field? (The same individual that performed the original work will be performing the completion work. He was the City's electrician for their Sepulveda electrical too.) We'd obviously prefer to process this minor change as inexpensively as possible and look to your guidance for that.

Thanks for your help Anthony!
